## Uzone Design

Clicklock - unique boltless connection technology

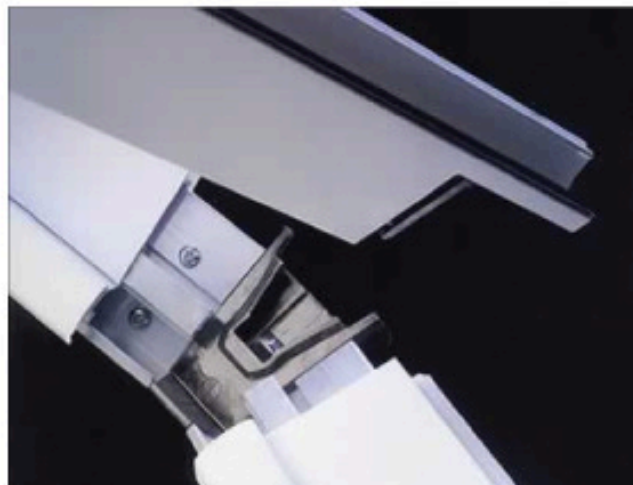

Thanks to innovative Clicklock technology, a unique feature, there are up to 75% fewer installation steps and 90% less bolts. So be prepared for a faster, cleaner and tidier installation with no compromise on quality or price!

*If you are installing yourself, you will just love the way the glazing bar locates into the engineered slots and just clicks - no drilling, no nuts, and no bolts. Just simple and secure!*

## The Design Difference

Good design can not only look good but can also have performance benefits. In this case Clicklock technology is used all the way down the glazing bars (to the eaves beam connection) obviating the need for nuts and bolts, and by sleeving all aluminium parts in PVC-U, there is no exposed aluminium, all the cold bridges are eliminated, and the possibility of condensation is reduced. What's more, ventilation is built-in as standard.
