

Products - KATZBECK D1 Windows

Katzbeck's Timber-Aluminium window is a stylish combination of the advantages offered by both types of window. The aluminium outside protects against the weather, while the timber inside adds to the interior design options and ensures cosy comfort.

Features

1. Extravagant design
2. Concealed hardware
3. Slim wooden face
4. Enlarged pane surface
5. High pane installation depth
6. Innovative adhesive technology
7. Built-in burglary protection
8. Microfoam technology
9. Many additional features
10. Energy efficient window

Technical Details

Design without Compromise

Striking details blend into an extravagant overall appearance to result in a richly expressive product reflecting contemporary notions.

Thermix Spacers

The thermal engineering applied in these spacers makes them highly superior to conventional systems-enhancing the thermal protection of the window as a whole.

Concealed Hardware

An intelligent design allows as little as 8mm space between the casement outer edge and the wall surface. High-quality appearance and solid engineering makes the D1 a natural choice for exclusive architecture.

High Pane Installation Depth

An installation depth of 16mm reduces to a minimum any heat loss due to thermal bridges.

Adhesive Technology

Our innovative technology **guarantees a 100% seal between glass and timber** - Eliminating the need for sealing inside joints with silicone. The both looks better and makes cleaning easier!

Security

With KATZBECK'S D1 Windows, panes are bonded with the casements, resulting in built-in burglary protection as standard.

burglary protection as standard.

Slim Wooden Face

The wooden face appears unusually light, making for a larger pane surface, which in turn enhances thermal protection. This results in bright, open rooms bathed in light.

Foam Seal

The revolutionary microfoam seal enhances durability and longevity while improving protection against noise and cold.

Innovative Profile for Joining Window Ledges

The joint between the window and the window ledge is absolutely reliable, ensuring controlled water drainage as well as optimum ventilation of the aluminium frame. PVC-free material is used, and energy-efficient methods are applied in manufacturing and processing to conserve natural resources.

Glass Pack Thickness

The D1 window system offers a number of glass packs to choose from.

Colour Options

Variety of colours at no extra cost!

Experience the infinite variety of colours of our wood-aluminium windows!

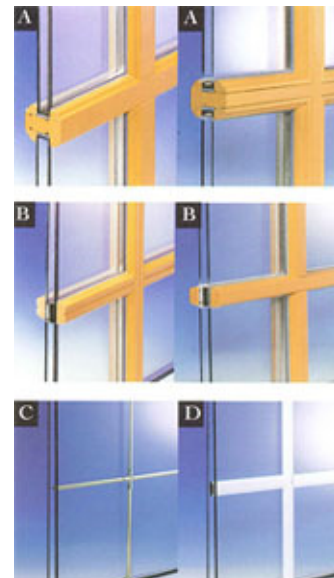

Glass

Best Glass

More economical - more ecological - more depth of colour: energy-saving construction and environmentally aware lifestyle are increasingly important criteria at work and at home. KATZBECK offers an outstanding alternative to customary heat insulation glass - energy-gaining glazing. Optimum translucency - ideal indoor climate - top economic efficiency!

Totally colour-neutral

Near perfect true colour when looking through the window. The window bars stay whiter. Curtains stay white (instead of yellow, bluish, greenish etc.). Live and work in a brighter environment: high level transparency thanks to optimum translucency!

A - Glass divider bars
B - Adhesive bars
C - Brass bars
D - Helima bars
